

Thank you for your purchase!

Congratulations on taking care of yourself and/or your loved ones.

We wish you all the best and many openings with your Lotus.

Your Lotus Protection Team

Advice on the use of your products / Cautionary notes :

Caution:

Choking or suffocation hazard

None of the products in the Lotus-protection range are intended to be put in the mouth. Do not give the objects to a child or to a person without discernment.

Lotus protection and its quantum nano-layer technology is the most advanced available for balancing and preventing the devastating effects caused by electromagnetic waves. The products in the Lotus-Protection range allow, thanks to the application of a unique process, the regulation of unbalanced electrical oscillations.

Daily use of your USB stick and/or jewellery :

Your consciousness will need time to adjust to the quantum alignment technology. In the beginning, it is preferable for some people not to wear the necklace or connect the USB stick all day or night. It is also important to listen and be kind to yourself.

Everyone is different, the adaptation time varies from one person to another, some users feel the effects immediately, in the form of a sensation of calm, harmony and serenity. Others will have to wait several days or even weeks for the body's revitalisation mechanisms to be fully effective.

Range of effect of the field :

It is 20 meters min. for the USB key, when it is connected to a charger or a USB port, without activation by an electric charger the protection is 3 meters.

Wearing the Lotus pendant or bracelet maintains a minimum diameter of 3 metres within which all electrical, magnetic and electromagnetic disturbances are converted into balanced fields.

The 128 GB USB stick :**Your USB flash drive is configured so that it will turn on if it recognises the media.**

In this case, even if it is not turned on, the key transmits remotely because the electric circuit is present in the near radius of the nano chip.

USB sticks are removable media that allow you to easily transport data or applications.

You should never use a USB stick as a backup for your data (or only temporarily)... especially for backing up the documents on it very regularly.

You should really think of USB sticks as a medium for carrying your data, and no more.

Your Tiger Eye / Hawk Eye Quartz jewellery:

To protect your jewellery, it is important to remove it when in contact with water (shower, bath, swimming). Your Tiger Eye Lotus jewellery does not need to be recharged because the quantum chip will instantly transform any negative energies and prevent your stones from becoming negatively charged.

Indeed, in lithotherapy and without the chip, it is advisable to purify and recharge your tiger eye quartz. This will no longer be necessary with quantum technology.

Your tiger eye jewellery is very resistant, its hardness is 7 on the mohs scale, so it is scratchproof. However, its hardness makes it brittle, so avoid dropping it on a hard floor as it could break.

More about Tiger's eye :

Its chemical composition is silicon oxide SiO_2 .

It belongs to the group of micro-crystalline quartz.

Its density is about 2.68.

History, legends and beliefs about tiger's eye

Tiger's eye was discovered in the 1800s in South Africa. It was first thought to be a very rare stone and was therefore sold as a very expensive gemstone.

But more deposits were discovered, first in West Africa, and by the early 1900s tiger's eye became a modestly priced semi-precious stone.

Deposits : South Africa, USA, Russia, Australia, Mexico, Brazil, Madagascar, India and Burma.

Warranty on Lotus-Protection products:

Products are guaranteed for 2 (two) years.

Lifetime :

Current studies show an unlimited life span as long as the unit is not damaged.
